

CC31xx SLS Get Time Application

Overview and application details

This sample application demonstrates how to connect to an SNTP server and request for time information. The application processes the received data and displays the time on console.

For information on how to use Visual-Studio or Eclipse to compile and run this application, refer to cc3100_getting_started_guide_swru375 [1] in '<cc3100/>docs' folder.

By default, this application communicates w/ CC3100 over SPI. The SDK has UART-Drivers as well for 'SimpleLink Studio' platform. For using the UART interface to communicate w/ CC3100, macro **SL_IF_TYPE_UART** has to be defined in the application-project's properties. Also, 'COMM_PORT_NUM in main.c needs to be changed to the first com-port that gets enumerated for 'J6' of 'CC31xxEMUBOOST Brd'. **In case four ports are getting enumerated, user should use the third com-port.**

Note: This wiki page is only applicable for **CC3100-SDK v1.0.0** and upward releases. For documentation on older SDKs' examples, refer corresponding file in <cc3100-sdk-installation-location>\cc3100-sdk\docs\examples\

Source Files briefly explained

i. main - Initializes the device, connects to a AP, open a UDP socket, requests and processes the time information.

Usage

- Prerequisite: Internet connectivity is required to work w/ this sample application
- Edit main.c to set the SNTP server's name (in variable SNTPserver) - Any server from the below list can be used for demo

```

/!* ##### List of SNTP servers #####
*! ##
*! ##      hostname      |      IP      |      location
*! ## -----
*! ## nist1-nj2.ustiming.org | 165.193.126.229 | Weehawken, NJ
*! ## nist1-pa.ustiming.org | 206.246.122.250 | Hatfield, PA
*! ## time-a.nist.gov      | 129.6.15.28    | NIST, Gaithersburg, Maryland
*! ## time-b.nist.gov      | 129.6.15.29    | NIST, Gaithersburg, Maryland
*! ## time-c.nist.gov      | 129.6.15.30    | NIST, Gaithersburg, Maryland
*! ## ntp-nist.ldsbc.edu   | 198.60.73.8    | LDSBC, Salt Lake City, Utah
*! ## nist1-macon.macon.ga.us | 98.175.203.200 | Macon, Georgia
*! ## 0.in.pool.ntp.org    | 123.108.225.6  | India

*! ## For more SNTP server link visit 'http://tf.nist.gov/tf-cgi/servers.cgi'
*! #####
*/

const _u8 SNTPserver[30] = "nist1-pa.ustiming.org"; /* Add any one of the above servers */

```

- Build and launch the application using Visual-Studio or Eclipse.

- The application requests user for the AP's SSID and security parameters for establishing the connection. It also requests user for the time-zone for getting the time-data. Enter the required information on the console.

The application connects to the SNTP server and opens an UDP socket to communicate w/ it. It receives and processes the time-information and displays it on the console

- On success, below message will be displayed on the terminal

```
Get time application - Version
1.2.0
*****
Device is configured in default state
Device started as STATION
Please input the SSID you wish to connect to:
TP-LINK-152
Encryption Types:
1: Open
2: WEP
3: WPA
Please enter the corresponding number for the encryption type:
1
Please enter the GMT value of the Zone (HH:MM):
+5:30

Connecting to AP TP-LINK-152...
Connection established w/ AP and IP is acquired

Server nist1-pa.ustiming.org has responded with time information
Fri Feb 13 2015 11:44:12

Device disconnected from the AP on application's request
Press any key to continue . . .
```

Limitations/Known Issues

None
