

How to make This proyect.

1) You have to save the next files in the flash memory of the ESP32.

1A) You can download the firmware from here

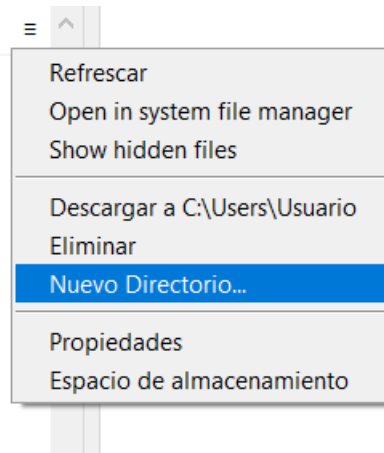

<https://micropython.org/download/esp32/>

1B) The files sdist_upip.py, stup.py and ssd1306.py are in the folder micropython-ssd1306-master.

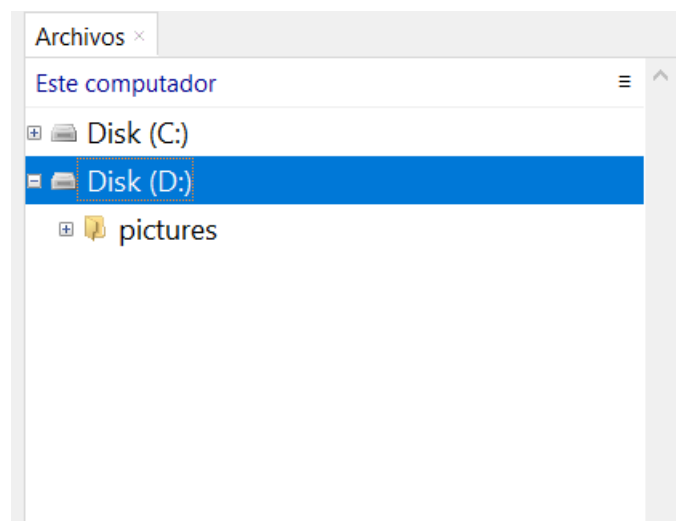

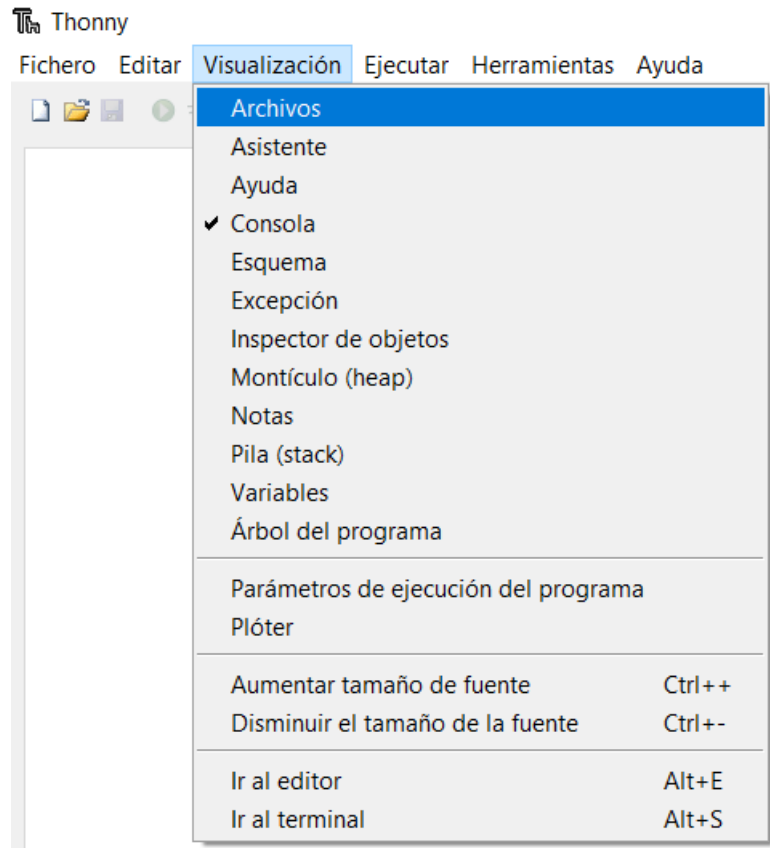

2) We need to create a folder in the flash memory to saving the files .pbm.

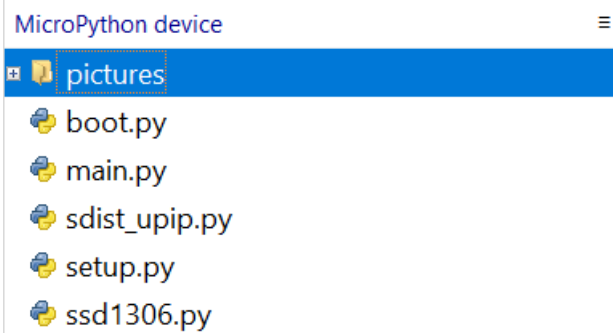

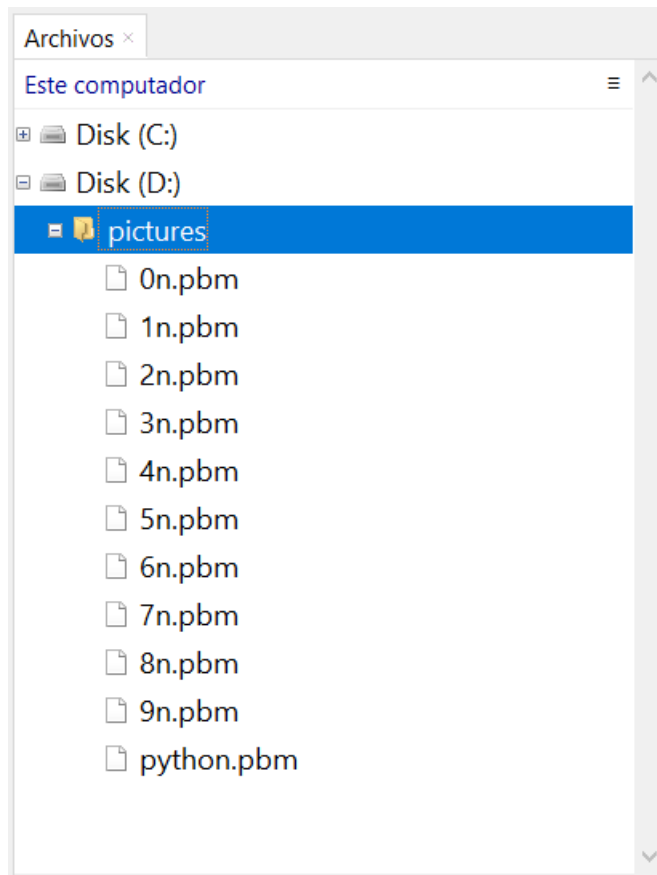

MicroPython device

📁 pictures
📄 boot.py
📄 main.py
📄 sdist_upip.py
📄 setup.py
📄 ssd1306.py

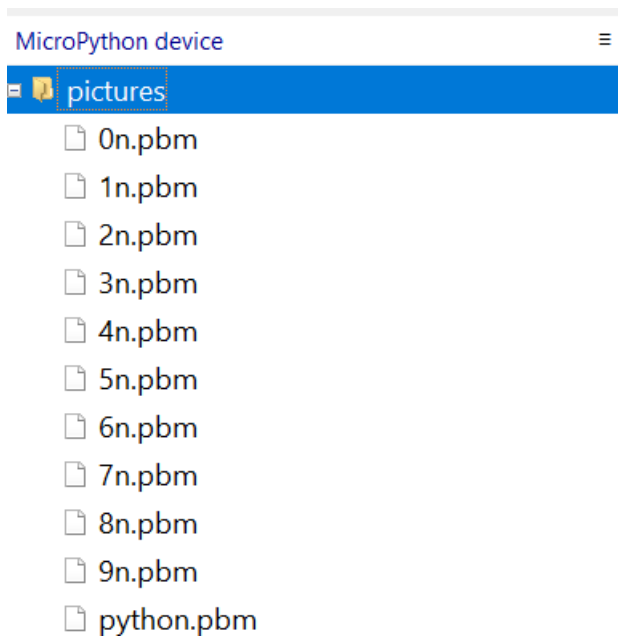

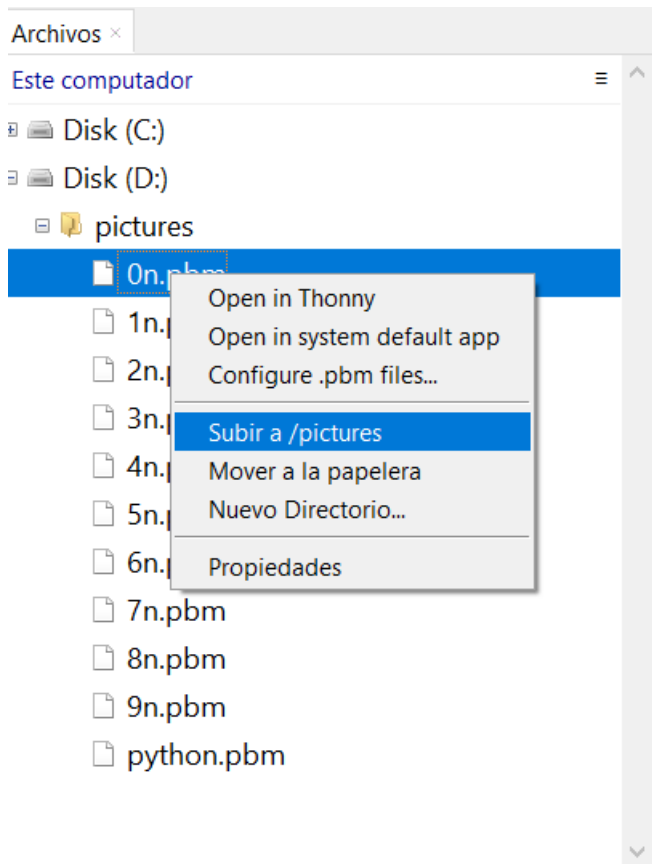

3) How to save the files .pbm in the folder.

MicroPython device
/ pictures

**the folder must be
empty**

3A) You can convert png files to pbm here.

<https://onlineconvertfree.com/es/convert-format/png-to-pbm/>

4) Schematic
